

## **SWE-Course**

SWE-Course is a new online course that will allow students to continue learning fun STEM content virtually! The topic for the course this semester will be centered around the science of climate change and the environment. This course plans to run 3 sessions over 3 consecutive weeks in November (Nov. 7, Nov. 14, Nov. 21) at 3pm Eastern. Content will be crafted for middle-school age students in mind, but students outside of this age range may also register if interested.

Although the course will be held virtually, we are hoping to send build kits to all registered students, so that everyone can participate in a fun hands-on activity with the class! Use this [form](#) to register interested students. For any questions regarding this program, contact Nicole Cybul ([ncybul@mit.edu](mailto:ncybul@mit.edu)).
